SUGARCANE & BAMBOO PRODUCTS

Eco-friendly and biodegradable products that help combat global warming through the use of resources.

100% biodegradable

Technical consulting
and design

Committed to
the environment

About Us

We are dedicated to creating eco-friendly and biodegradable packaging solutions that benefit both your business and the planet.

We use recycled and naturally sourced materials, such as natural papers, greaseproof cardboard, sugarcane fibers, cereals, and grasses, to produce packaging that composts in less than 3 months. We offer customized solutions for the food, industrial, and agribusiness markets, focusing on biodegradable and compostable products that help reduce environmental impact.

Our commitment to quality and customer satisfaction drives us to work as a team, use resources efficiently, and constantly innovate. We aspire to be leaders in the biodegradable and compostable packaging market, promoting sustainable practices that benefit our customers and the environment.

Sugarcane pulp products

Bagasse is considered a renewable and sustainable resource due to its abundance as a byproduct of sugarcane production. Its utilization helps reduce the environmental impact of sugarcane processing, minimizing waste and providing a valuable material for diverse applications.

Bamboo product

Bamboo, a fast-growing and resilient plant, has become an eco-friendly and sustainable alternative for creating lunch boxes. Its renewable nature and rapid growth make it an ideal resource to replace materials such as plastic or wood, which come from non-renewable sources and have a negative environmental impact.
